

Here is a structured presentation script with copy-paste prompts designed to showcase your chatbot's **conversational RAG intelligence**, **multi-turn dialogue handling**, and **4-tier escalation engine** during a live demo.

Part 1: Conversational & Knowledge Base Queries (With Follow-Ups)

Use these 2-turn conversation flows to show how the bot dynamically answers based on uploaded documents and maintains context across messages.

Scenario 1: Delivery Rules & Monsoon Conditions

* **Goal:** Show how the bot retrieves specific monetary thresholds and adapts when constraints change.

*  **Initial Query (Turn 1):**

> **"What are your standard delivery charges, and how does the minimum order value change if it starts raining heavily outside?"**

*  **Follow-up Query (Turn 2):**

> **"So if my order total is ₹250 during heavy rain, will I still get free delivery if I have an active FoodiePass subscription?"**

Scenario 2: Dietary Rules & Safety Guarantees

* **Goal:** Showcase precision retrieval regarding food preparation, Jain/Veg compliance, and packaging.

*  **Initial Query (Turn 1):**

> **"I am ordering food for a family gathering with strict Jain dietary requirements. How does your Green Dot guarantee prevent non-veg cross-contamination?"**

*  **Follow-up Query (Turn 2):**

> **"What happens if the delivery rider arrives with a torn safety seal tape on my pure-veg package?"**

Scenario 3: Wallet, Refunds & UPI Payment Policy

* **Goal:** Demonstrate policy synthesis on financial terms and wallet mechanics.

*  **Initial Query (Turn 1):**

> **"If my UPI payment fails and money is deducted from my bank, what is the difference between getting a refund in Real Cash Wallet Money versus Promo Cash?"**

*  **Follow-up Query (Turn 2):**

> **"Can I use my Promo Cash to cover 100% of my next order, or is there a transaction cap?"**

⚡ Part 2: Escalation Engine Demonstrations (Level 1 to Level 4)

Use these standalone prompts to trigger each level of your **Gmail Escalation System**. During your presentation, you can switch tabs to your email inbox to show the real-time notification email arriving!

🟢 Level 1: Low / Knowledge Gap

* **Trigger Reason:** The query is calm, but the answer does not exist in the uploaded documents (Confidence Threshold failure).

* **Target Recipient:** `Tier 1 Support Staff`

> **Copy-Paste Prompt:**

> **"Do you accept Sodexo or Pluxee meal card vouchers to pay for corporate lunch orders?"**

* **Expected Bot Action:** Acknowledges it lacks specific info on Sodexo/Pluxee cards and sends a Level 1 escalation email to Tier 1 Support.

🟡 Level 2: Medium / Mild Frustration & Payment Glitch

* **Trigger Reason:** Mild customer annoyance combined with a technical payment error or double debit.

* **Target Recipient:** `Senior Support Agent`

> **Copy-Paste Prompt:**

> **"My UPI payment debited ₹450 twice for Order #BD-8820. The app threw an error and says 'Pending Settlement'. I am getting annoyed because my wallet balance is still zero. Please check this payment glitch."**

*** **Expected Bot Action:**** Explains standard UPI reversal timelines, detects mild frustration, and sends a Level 2 notification card in the UI + email to the Senior Support Agent.

🟡 Level 3: High / Anger, Repeated Failure & Manager Demand

*** **Trigger Reason:**** High emotional signal (anger), severe delivery delay, and an explicit demand to speak with a manager.

*** **Target Recipient:**** `Support Manager`

> ****Copy-Paste Prompt:****

> **"This is the THIRD time my family dinner is over an hour late! The rider turned off his phone, and my guests are waiting. I want to speak to a support manager RIGHT NOW or give me a full refund back to my card!"**

*** **Expected Bot Action:**** Apologizes empathetically, overrides normal automated responses, highlights a pulsing Level 3 UI alert, and routes an immediate email transcript to the Support Manager.

🔴 Level 4: Critical / Safety Hazard, Religious Violation & Legal Threat

*** **Trigger Reason:**** Physical injury/health risk, severe dietary breach, or explicit legal/regulatory complaint threats (FSSAI/NCDRC).

*** **Target Recipient:**** `Business Owner / Director`

> ****Copy-Paste Prompt:****

> **"We ordered from a certified Green Dot Pure-Veg restaurant, and my daughter found chicken pieces inside her meal! She suffered an allergic reaction and we had to take her to an emergency clinic. I am filing an FSSAI complaint and taking legal action against BiteDash!"**

*** **Expected Bot Action:**** Triggers the highest priority alert system, issues a formal apology, displays the Red Level 4 Critical Card in Streamlit, and fires an instant high-priority email to the Business Director.

📌 Quick Tips for a Smooth Presentation

1. **Show the Sidebar First:** Start the demo by showing the `.pdf` / `.txt` file uploader and the hardcoded Gmail hierarchy in your Streamlit sidebar.
2. **Highlight Micro-Animations:** Point out the typing indicator, smooth message slide-ups, and the pulsing border glows on escalation cards when Level 3 or 4 triggers.
3. **Keep an Email Tab Open:** Keep your test Gmail inbox open in a second browser window. When you trigger Level 3 or Level 4, switch tabs to show the exact email notification containing the session transcript, timestamp, and severity level.
